

## Water Manifold & Flow Control Devices

Renmar have now added a quality range of products to assist with the distribution of water around the mould tools, together with mechanical and digital flow devices.

Wide range of hot and cold manifolds are available with various inlet and outlet combinations together with ball valves and associated fittings.

Mechanical flow meter devices are available to be installed as seen in picture or in individual lines to certain tool circuits, these show both pressure and flow. Range of sizes available all BSP threads.

Digital version of the flow meters are readily available with a visual display on the unit and the option to take data from the unit and link into moulding machine control if required. All inlet/outlet have standard BSP threads.
